The present document is concerned with dissemination and exploitation plans of the main results obtained in EVEREST project. It is a living document which describes the ongoing activities; this exploitation plan will be continuously amended by new available results and information on technology and markets. Each partner of the consortium will contribute to the exploitation of the results, according to its own activity, business and mission.

## **EXECUTIVE SUMMARY**

The project explicitly recognises the importance of disseminating project results. In fact, it constitutes one major contribution to the entire wireless communications community. The project contains several tasks with scientific value, and it is in the interest of research-oriented partners to publish these results in the open literature. The dissemination activity as it will be organized in the project is explained, also keeping into account the partner-specific dissemination plans. A general exploitation roadmap is then discussed, subsequent version of this document will refine and update it. Finally, a report on standardization activities, which may be of interest for EVEREST project, also including a list of the main topics discussed in standardization bodies and industry fora, is given.
